Goals	Working Plugin that can be integrated in IntelliJ.
	We create a product that satisfies our industry partners
Meeting norms	We want to be punctual, if not, tell the group // maybe alternative: We start on time. If late, notify the others.
	Absence should be communicated before the meeting
	Focus and concentrate
Working norms	We finish our assigned tickets on time
	We upload our changes at 8 PM the day before our meetings
Coordination norms	We stick to our assigned roles
	Assign each task to a specific person.
Communication norms	No voice messages
	We communicate problems to each other
	Everyone checks the communication channel (Discord) regularly at least once a day.
	If someone is not reachable within 1 & 1/2 week, Prof. Riehle is informed and asked for further instructions
Consideration norms	We discuss disagreement openly
	We vote for final resolution
Cont. improvement norms	Teams progress will be tracked through weekly updates
Rewards	Everyone celebrates via a reaction in the zoom after each sprint
Sanctions	You have to complete unwanted tickets if you violate our norms
Signatures	
Scrum Master	Olivia Dargel
Product owner	Felix Nützel
Product owner	Emanuel Erben
Software developer	Lennart Heimbs
Software developer	Brianne Oberson
Software developer	Luca Böhm
Software developer	Liam Fogarty
Software developer	Nikolaos Malliaros
Software developer	Tim Niklas Herzig

Product Vision	Project Mission
The reason of existence of the envisioned product (beyond this project):	The mission of this particular project (in the context of the product vision):
Software quality hinges on robust testing practices. While code coverage remains a prevalent metric, evaluating the true effectiveness of tests in ensuring expected behavior often gets overlooked. This is where Mutation Testing steps in—a method that generates code variations to evaluate the ability of tests to detect changes. PiTest, a leading tool in Mutation Testing, falls short due to its limited integration capabilities. It lacks the functionality to display test run results and configure test scope dynamically, creating a gap in assessing test effectiveness within the environment best known to the developer. Our product vision is to introduce an IntelliJ IDE plugin that not only presents PiTest results but also empowers users to seamlessly fine-tune test scopes, even down to specific classes. By integrating these features, we aim to bridge the existing gap, providing enhanced visibility and control within the familiar IntelliJ environment, thereby ensuring higher-quality test outcomes.	Our mission is to enhance software mutation testing within the IntelliJ IDE by implementing a specifically designed plugin that integrates with PiTest. The approach involves several key steps: Integration Development: We will develop an plugin that integrates with IntelliJ IDE, ensuring that PiTest's functionalities are easily accessible within the developer's primary workspace. Dynamic Test Configuration: A core feature of our plugin will be to enable dynamic configuration of test scopes. This will allow developers to selectively fine-tune their testing efforts, focusing on specific classes or modules. Result Visualization: The plugin will provide visualizations of Mutation Testing results. This will make it more comfortable for developers to interpret PiTest outputs. User-Centric Design: The interface and functionality of the plugin will be designed with a strong focus on user experience, ensuring that it is both powerful and easy to use. By following these steps, we aim to not only enhance PiTest’s functionality within IntelliJ IDE but also empower developers with more efficient, precise, and user-friendly software testing tools, ultimately leading to higher quality software development.

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	All acceptance criteria are met.		
	Work products are uploaded to the Github repository.		
	A pull request is created for each related branch.		
	The work products in the pull requests are reviewed.		
	Github CI Workflow passes for the branches		
	The corresponding branches are merged and closed.		
	The bill of materials section of the planning documents is updated.		
	Tests are written for the added features		
		A working and significant enhancement from the previous sprint is designated as a release candidate.	
		Existing features and security protocols must remain operational.	
			The project can be successfully built and deployed
			All created tests are successful.
			Developer documentation is created.
			User documentation is created and updated
			The release has been approved by all team members
			The release has been approved by all team members
			All issues are closed
			All pull requests are closed
